The machine automatically collects eggs from the tray by moving them over knives that break and flare shell. Subsequently, the white and the yolk to the gutter flow down together controller. The operator of the machine is searching the damaged egg yolks and remove them to the gutter drain. Egg white and yolk flow into the distributor, which redirects separate white and yolk to substituted buckets.

Output Capacity:
3200 eggs / hour for whole egg
1800 eggs / hour for separation
of egg white and egg yolk

Minimal Workspace:
2000 x 1500 mm
All machine parts are made of
stainless steel AISI 304

Two Operating Modes:
Fast mode - for normal
quality of eggs
Precision mode - for watery egg
white and weak egg yolk
