

CONTAINER WASHER

Efficiency by using less water and energy is reducing operation costs. In the wash section all contamination is removed; the water in this section is continuously filtered to assure good wash quality. The crates are rinsed with clean water, this water is then re-used washing ensuring lower water usage. Lowering water consumption has effect on chemical and heating power usage.

- Using less water and energy
- Reducing operation cost
- One man operation is possible

Customized solution for cleaning you containers!
